

Exotic nuclei: on the edge of existence

Free IOP talk at the University of Leeds

Dr Marina Petri (University of York)

7.00 pm Wednesday 27th March 2019

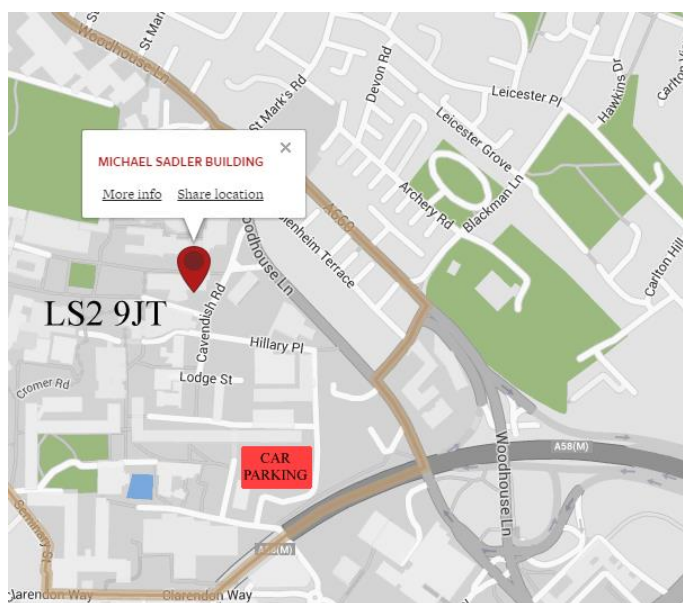

Free tea, coffee and biscuits from 6:30pm

University of Leeds, Michael Sadler Building, Rupert Beckett Lecture Theatre

Erin O'Donnell, Michigan State University

In the laboratory, physicists can create atomic nuclei which we haven't otherwise observed in nature, challenging our understanding of the fundamental fabric of the universe. In this talk I will discuss the role of exotic nuclei in our understanding of nature and I will highlight the exciting research currently undertaken in Nuclear Physics.
